

Jehiel Martinez

Full-Stack & Cloud Engineer

San Pedro Sula, Honduras | jehielmartinez@gmail.com | jehielmartinez.com | github.com/jehielmartinez | linkedin.com/in/jehielmartinez

SUMMARY

I'm a software engineer who builds across the full stack and the cloud — from **React** and **React Native** front ends to **NestJS** and **NodeJS** services, down to the infrastructure they run on, and increasingly building **AI-powered products** on top of it. I care about shipping scalable, well-architected solutions that hold up in production.

Lately, much of my work is **AI application development** — shipping production LLM features across **OpenAI**, **Google Gemini**, and **Anthropic Claude**: streaming responses, tool use, and persistent memory, served through **Supabase** Edge Functions over a **PostgreSQL** backend with authentication and row-level security.

On the product side, I lead the development of mobile and web applications with **React Native (Expo)** and **ReactJS**, backed by **NestJS**, **NodeJS**, **Docker**, and serverless architectures. I own features end to end — from API design to release on the **App Store** and **Play Store**.

On the cloud side, I specialize in **Cloud Engineering** and **DevOps** across **AWS** and **Azure**, using **AWS CDK** and **Pulumi** for Infrastructure as Code to automate provisioning and management. I also build **CI/CD pipelines** that make **Android** and **iOS** app store deployments fast and repeatable.

I'm driven by solving complex problems with technology, and I'm always looking for ways to improve processes through automation and thoughtful engineering.

SKILLS

Languages: JavaScript, TypeScript, Python

Frontend: React, Next.js, Astro, React Native, Expo

Backend: Node.js, NestJS, Express, Supabase, PostgreSQL, Sequelize

AI: OpenAI, Gemini, Claude, LangChain, LangGraph

Cloud & DevOps: AWS, AWS CDK, Serverless, Azure, Pulumi, Docker, Kubernetes, ArgoCD, CI/CD, GitHub Actions, Fastlane

Product: RevenueCat, PostHog

EXPERIENCE

Senior Software Engineer

Jun 2025 – Present

Fortress Technology

- Senior full-stack engineer on a property-management and affordable-housing compliance SaaS, delivering features end to end across a Node.js/Sequelize backend, a React frontend, a shared TypeScript component library, and standalone payments and messaging microservices on AWS.
- Designed and built a centralized two-way SMS communication platform — a Messaging Hub with opt-in/opt-out preference management, conversation search and filtering, cursor-based pagination, real-time new-message indicators, and conversation-status sync across properties.
- Built duplicate prospect and lead management with a deduplication queue, row-level locking for concurrent merges, and account/profile merge resolution, and hardened accounting flows around ledgers, prorated transactions, and floor-plan conversions.
- Improved reliability and performance — offloaded bulk people-load operations to SQS worker queues, optimized ledger loading, gated rollouts behind feature flags, and decoupled the payments service from rent-roll loading.

Co-Founder & Lead Engineer

Mar 2025 – Present

Frontyard

- Co-founded Frontyard and lead its engineering — a places and parks discovery app built with Expo (React Native) and Supabase, featuring maps, push notifications, and in-app subscriptions.

- Built CoCo, a multi-agent AI content pipeline in Python with LangChain and LangGraph that researches outdoor places and auto-generates structured location guides — orchestrating planner, researcher, verifier, organizer, and summarizer nodes with Tavily web search and automatic verification and retry logic.
- Generated OpenAI embeddings for the place catalog and persisted the structured results to Supabase, powering semantic, activity-based search across the app.
- Built a content management system for the app's places data using Refine, React, and Supabase, giving non-technical editors a tool to manage content.
- Built an interactive map plugin to display project locations on a Google Map.

Engineering Manager

Nov 2020 – Jun 2025

CODE Exitos

- Led the migration of a large company's legacy AWS infrastructure to a modern, scalable architecture defined entirely as code with AWS CDK.
- Architected and led a decentralized social media platform built with React Native and a NestJS API, dockerized and deployed across Raspberry Pi SBCs and AWS EC2. Owned the project end to end — defining the AWS infrastructure with AWS CDK and automating deployment to provision isolated, on-demand servers for each instance.
- Provisioned and configured multiple environments for a .NET and Angular application on Azure using Pulumi for Infrastructure as Code, and built GitHub Actions pipelines to automate the build, test, and deployment workflow.

Software Engineer

Nov 2019 – Nov 2020

CODE Exitos

- Lead engineer on an outdoor-social application, building the mobile app in React Native and the CMS in ReactJS, backed by AWS Amplify. Published the app to both the App Store and Play Store.
- Built a local marketing application for OSU students in React Native, shipped to the App Store and Play Store. Used Fastlane to automate releases and ReactJS for the back-office, with a backend of AWS Amplify services and AWS Lambda serverless functions.

Plant Operations Supervisor Engineer

Feb 2016 – Oct 2019

Bijao Electric Company S.A.

- Ensured the reliable operation of all plant equipment.
- Supervised a team of field technician operators, assigning and prioritizing their daily tasks.
- Planned and carried out daily field inspections of plant equipment.
- Tracked and optimized production, consumption, and performance metrics.
- Authored the operations manual for every piece of equipment in the plant.

Turbine Operation Engineer

Feb 2016 – Jun 2016

Bijao Electric Company S.A.

- Ensured the reliable operation of a 35MW steam turbine and generator unit.
- Responded to and controlled emergencies such as house-load events, blackouts, and operational failures.
- Supervised the maintenance and safe operation of equipment during scheduled shutdowns.

CERTIFICATIONS

AWS Solutions Architect Associate · Github Actions

EDUCATION

Industrial Electrical Engineer — UNAH-VS (2016)
